March 2021

## ROMA HOSPITAL QLD

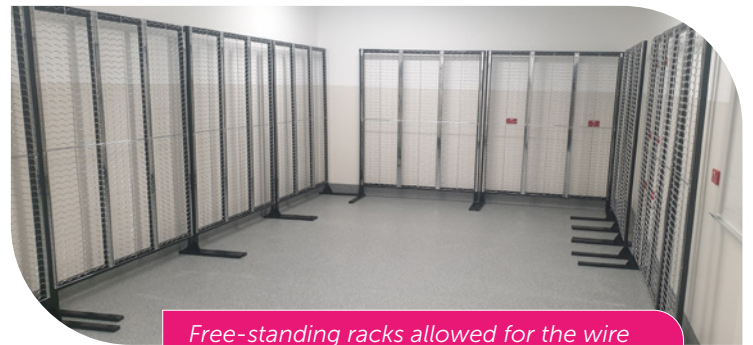

### PRIMARY RESULT ACHIEVED WITH THE HELP OF SELECT

A project for a brand-new hospital in Roma took place mid-way through 2020, where products were being transferred from an older hospital into the new one.

From the beginning the challenges that were faced included a small-time frame and tight budget constraints. The wire bin panels from the hospital weren't required to be mounted until they were sure it would work in the new hospital once fully operational.

The challenged faced prompted a unique solution where Select designed bespoke free-standing racks with attached wire bin panels to avoid having to mount the wire bins.

*Free-standing racks allowed for the wire bins to still be useful without having to be mounted to the walls.*

The sales team at Select were able to work closely alongside with the project team to ensure that all stakeholder requirements were met with helpful solutions and specialist's knowledge. The product supplied allowed for a flexible design that the facility utilised for multiple applications and departments while providing a uniform approved system that met infection control standards and storage capacity levels specifically needed for the facility. It was a unique situation that called for a custom solution that was efficient and the Select team were able to solve quickly. The outcome was a success, and the hospital didn't have to compromise on time and money that wasn't available.

# The Challenge

## What challenges were being faced?

Challenges faced involved a small-time frame and tight budget constraints all at the construction site. They didn't require wire bin panels mounted in the hospital until they were sure it would work for them once they were operational. ■

*The shelving was used across many departments for various applications.*

# The Solution

## What product was supplied?

Select designed and manufactured a range of bespoke free-standing racks with attached wire bin panels. ■

*" Overjoyed with the outcome that was provided from Select for a problem that was first thought to be unfixable. "*

**Roma Hospital Queensland**

## Any other key reasons for choosing Select?

The consultation process with the sales team and the way they worked very closely with the project team onsite to ensure that all stakeholder requirements were met. ■

## What were the key features of the product?

Flexible design allowed the facility to utilise the frames in multiple applications and departments while providing a uniform approved system that meets infection control requirements and storage capacity for the facility. ■

## How has Select/ or products, made life easier?

A simple solution that was provided quickly and efficiently and saved the project from other long-term problems that would have occurred. ■
